## 13 Disposal considerations

**Waste treatment methods**

**Recommendation:**

The product should not get into any kind of water without treatment. Dissolved in water, the material is easily biodegradable (90%) and will not cause any disturbance in wastewater-treatment plants. Due to its low solubility in water, larger amounts need to be eliminated by separators, such as those used for fats and oils.

For paper production and textiles it is recommended that waste release from site be limited to 0.98 and 5 kg/day, respectively if on site biological treatment is not available.

**Waste disposal key:** Can be incinerated, when in compliance with local regulations.

**Uncleaned packagings:**

**Recommendation:**

Disposal of small amounts of waste material to be done in accordance with federal, state and local environmental regulations.

Larger amounts should be collected as described in section 6 and used for recycling crude raw materials
